# Online Photoshop Idea Pitch

Presented by Team Eighteam

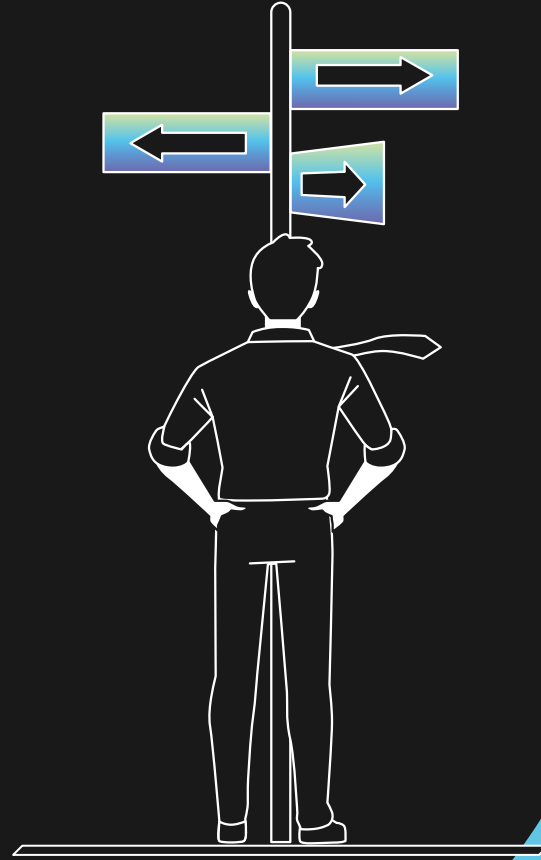

||||

.....

.....

# Motivation/Statement of Purpose

Sometimes we need something a little different from what our raw photos can provide. Or, our pictures don't look quite right. So, we will create a way to quickly edit it digitally! Downloading a dedicated application for editing pictures can be a drag, but with this local first CRUD web app, you can quickly upload a photo, make the edits you desire, and download them to your local device. If you have multiple pictures you need to edit you can view and download them at your convenience in the my photos section.

# Problem and Solution

There is no native way to quickly edit photos without opening a heavy app like Adobe Photoshop or ProCreate, this application should solve that issue as it allows users to efficiently go to the web app, upload a photo from their local device, make their edits, and download it right away.

# Features and Their Priorities

- Download and upload the picture
- Crop Image (and/or some other basic edits)
- Save, view and download pictures in a my photos page
- Appetite - These simple features should be attainable within the 4 weeks we have in the quarter, where we continuously program and design the features each week.

# User Stories/Personas

- As a photographer, I want to efficiently edit and crop my photos on any device without downloading a dedicated application, in order to submit my pictures to my blog quickly.
- As a normal everyday user who has/takes pictures, I want to have the ability to quickly and easily do basic edits and crops for my photo online on any device
- Oh no! My baby looks kinda wonky in this photo. Good thing I remember Team Eightteam's photoshop web app, now I can protect my ego and crop that out of my life without Planned Parenthood!

# Additional Info - User Interviews, Competitor App Analysis

## User Interviews:

- “There are so many photoshop applications online. But they usually need to download. This process is often a waste of time. I am seeking an online editor that I can edit my photos directly. ”
- “I just want to change the size of my photo and add some notes on it. I don’t need applications with too many fancy features! Less is more!”

## Competitor App Analysis:

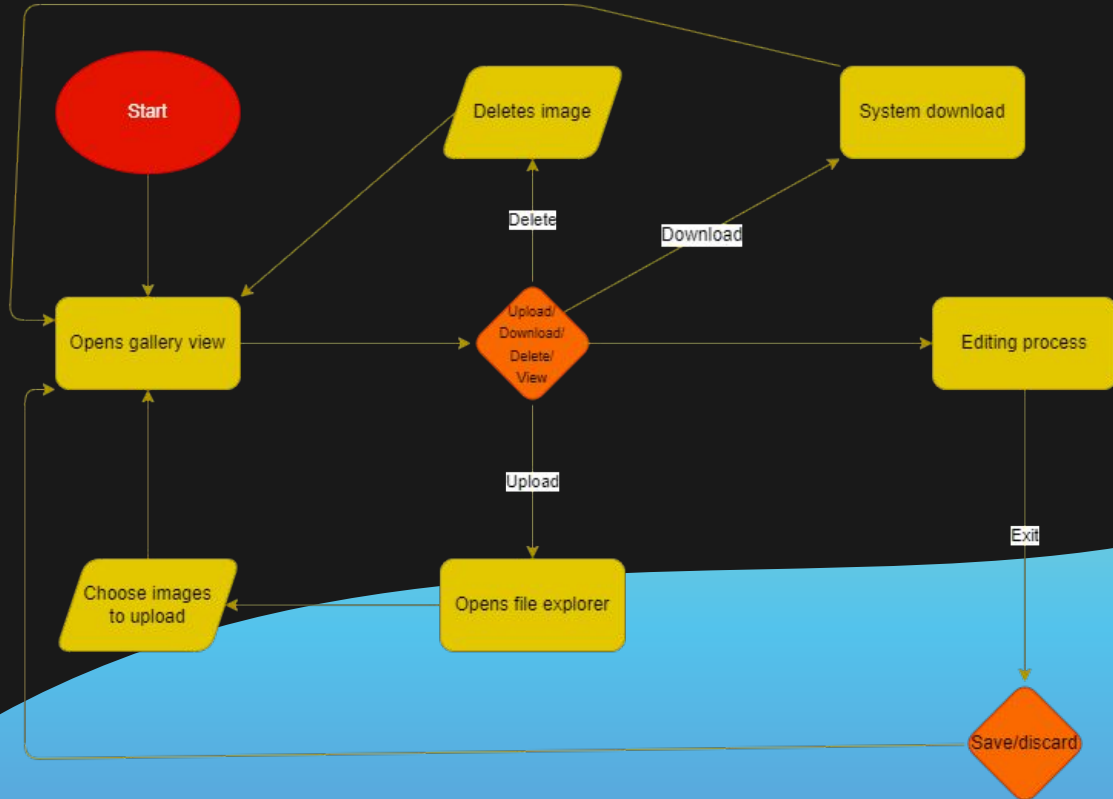

- Adobe Express is a strong online photo editor but it has too many feature for professional users. Sometimes, it is hard for users to find the basic editor functions.
- Native Mac/Windows apps are all different - don’t want to have to change workflow based on which machine

# Risks and Rabbit Holes

- Trying to add too many features without completing necessary ones first
- Some features can be deceptively complex, like drawing on the image
- Storing images may be complex
- Undoing edits is complex feature

# THANKS!
